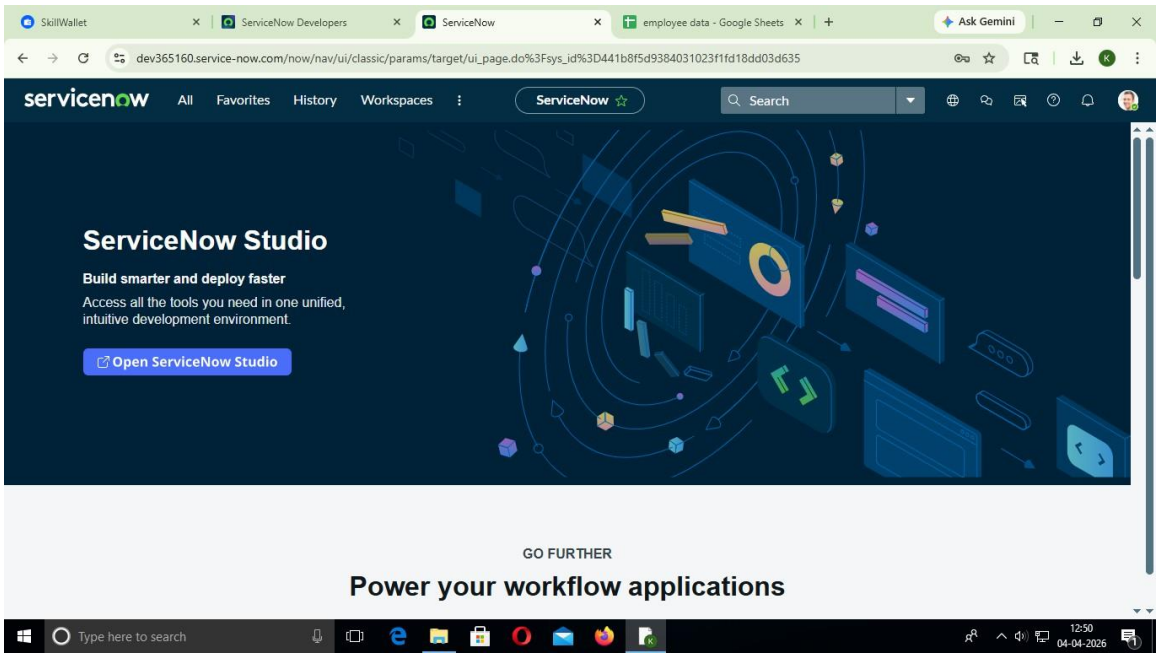
Project Name	Automated Data Import and Relationship mapping using input sets & Dot walking.
Maximum Marks	

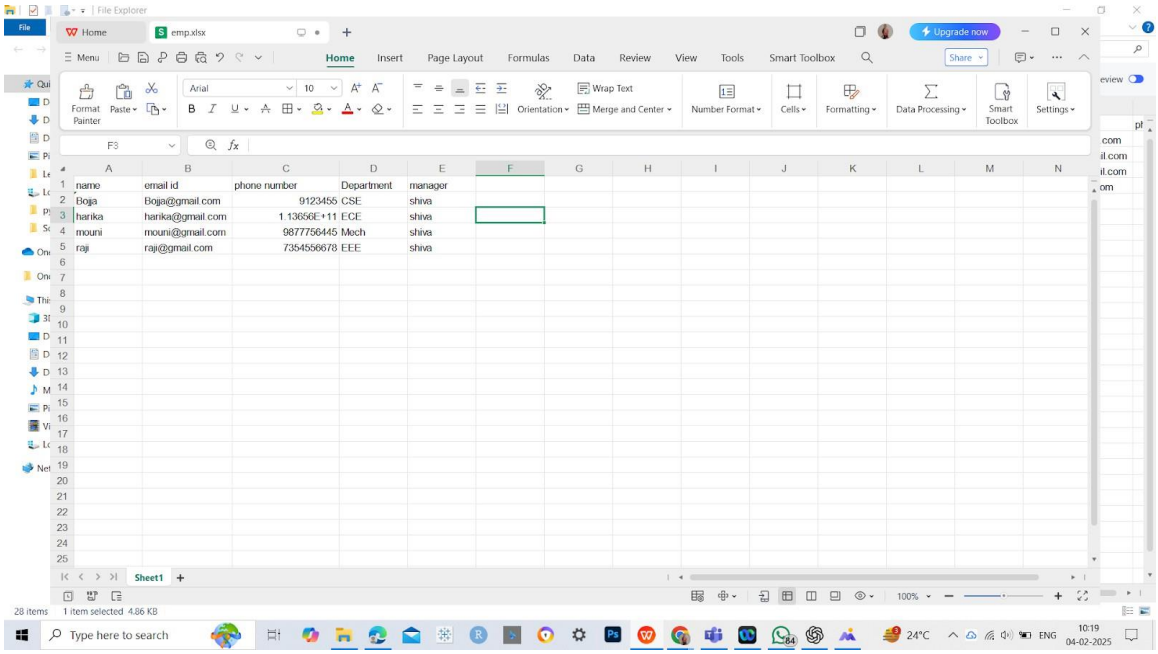
Automating Data Import and Relationship Mapping in ServiceNow Using Import Sets & Dot Walking

1. Introduction



- This project demonstrates how to import employee data into ServiceNow and map relationships using Import Sets and Dot Walking.

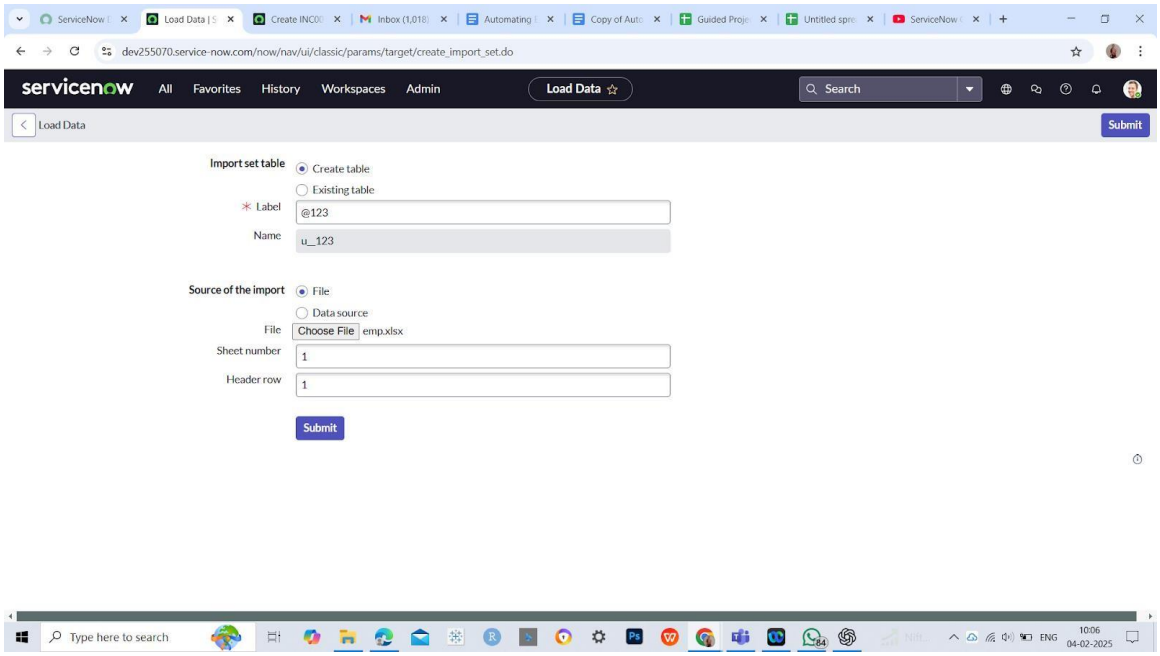
2. Data Source (Google Sheets)



name	email id	phone number	Department	manager
Boja	Boja@gmail.com	9123455	CSE	shiva
harika	harika@gmail.com	1.13656E+11	ECE	shiva
mouni	mouni@gmail.com	9877756445	Mech	shiva
raji	raji@gmail.com	7354556678	EEE	shiva

Fields: Name, Email, Department, Manager, Phone Number

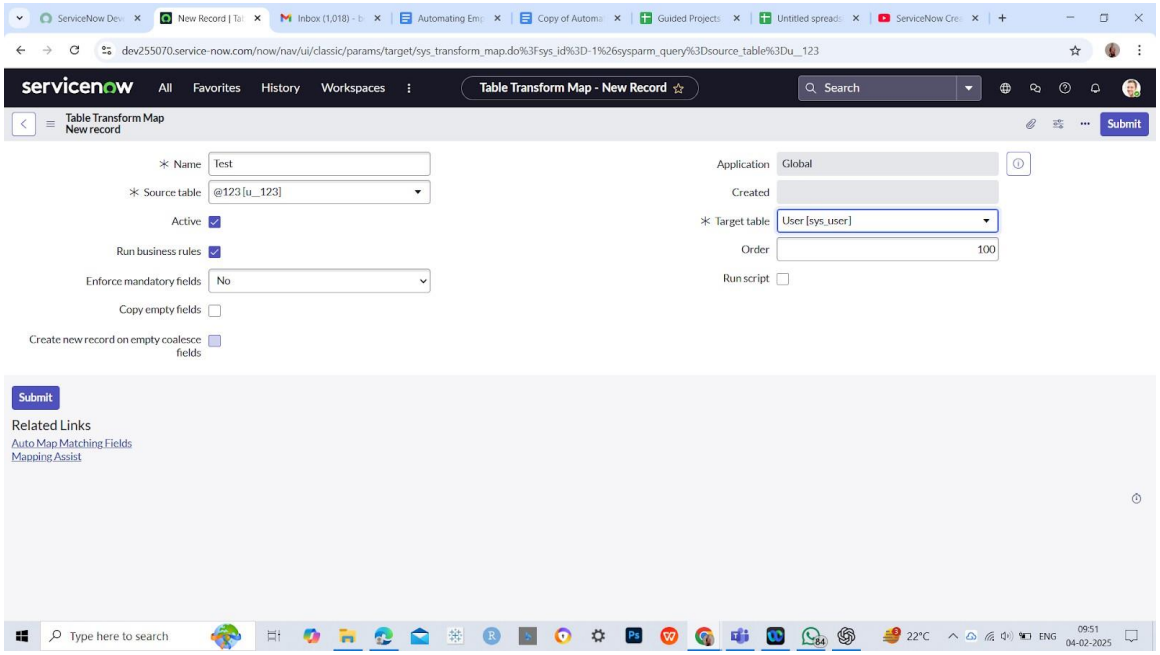
3. **Import Set**



Definition:

- Import Set is a temporary table used to import external data.

3. Transform Map



Definition:

- Defines mapping from Import Set to target table.

5. Field Mapping

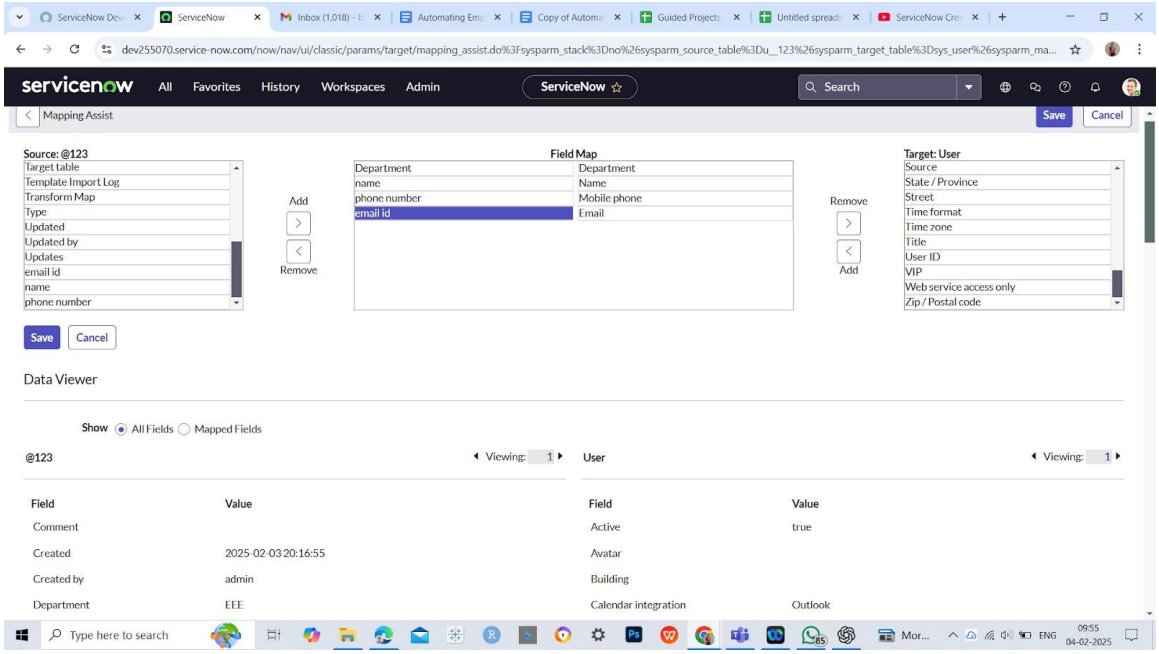
name -> name

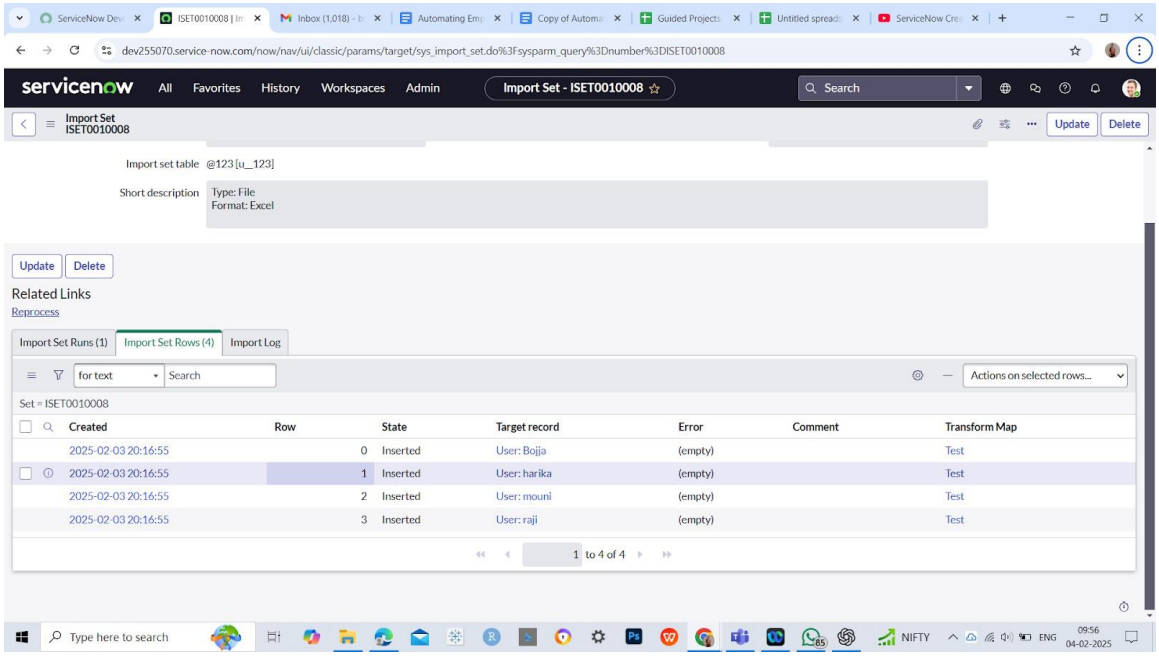
email -> email

department -> department

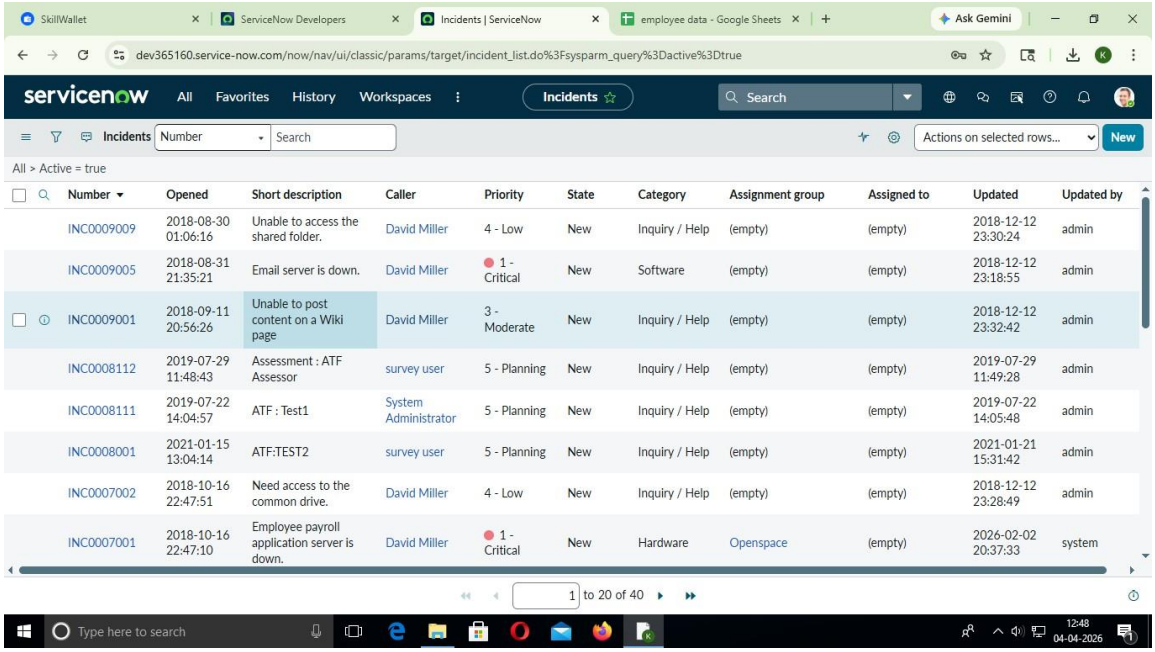
manager -> manager

phone -> phone





6. Incident Table

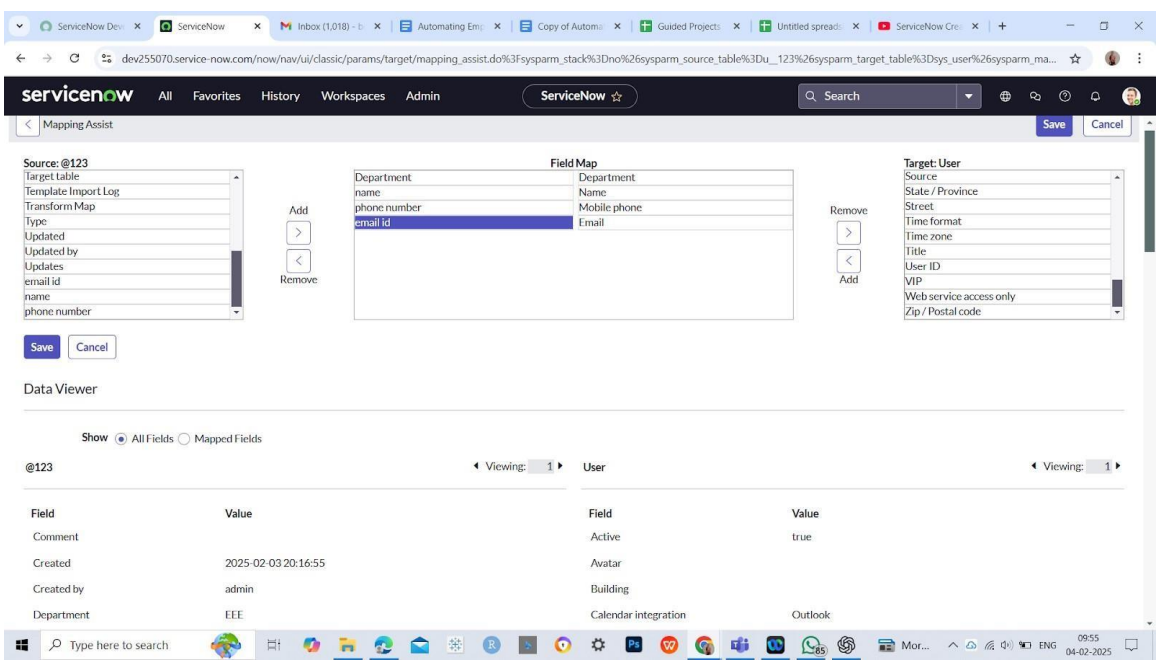


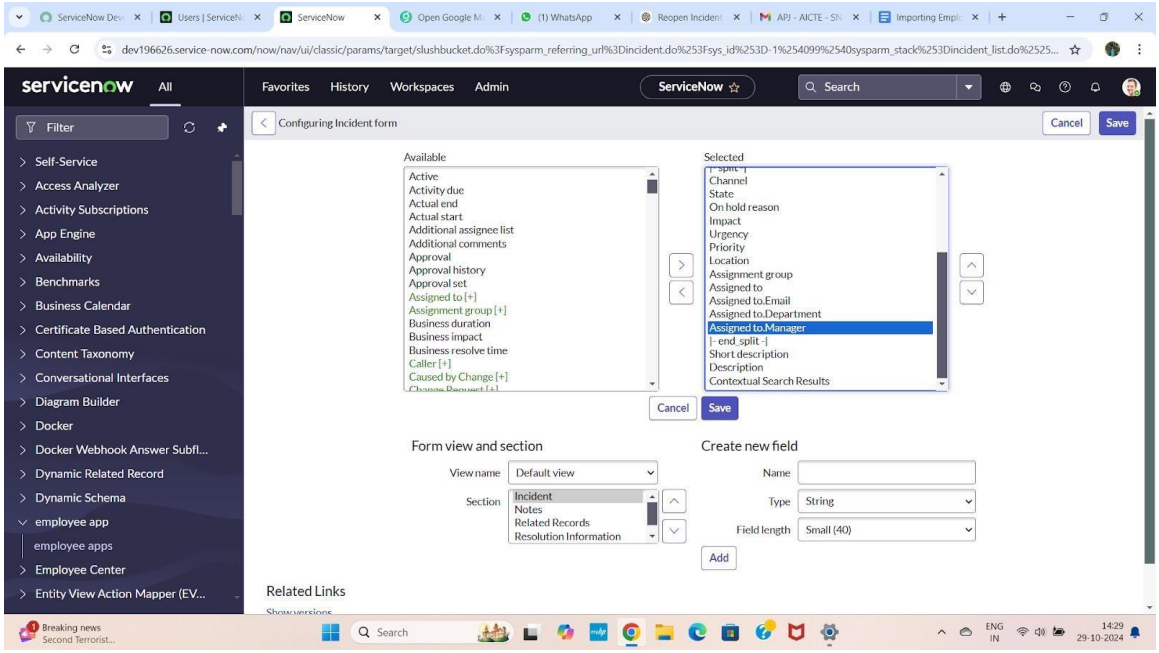
Observation: Department not visible initially

7. Dot Walking

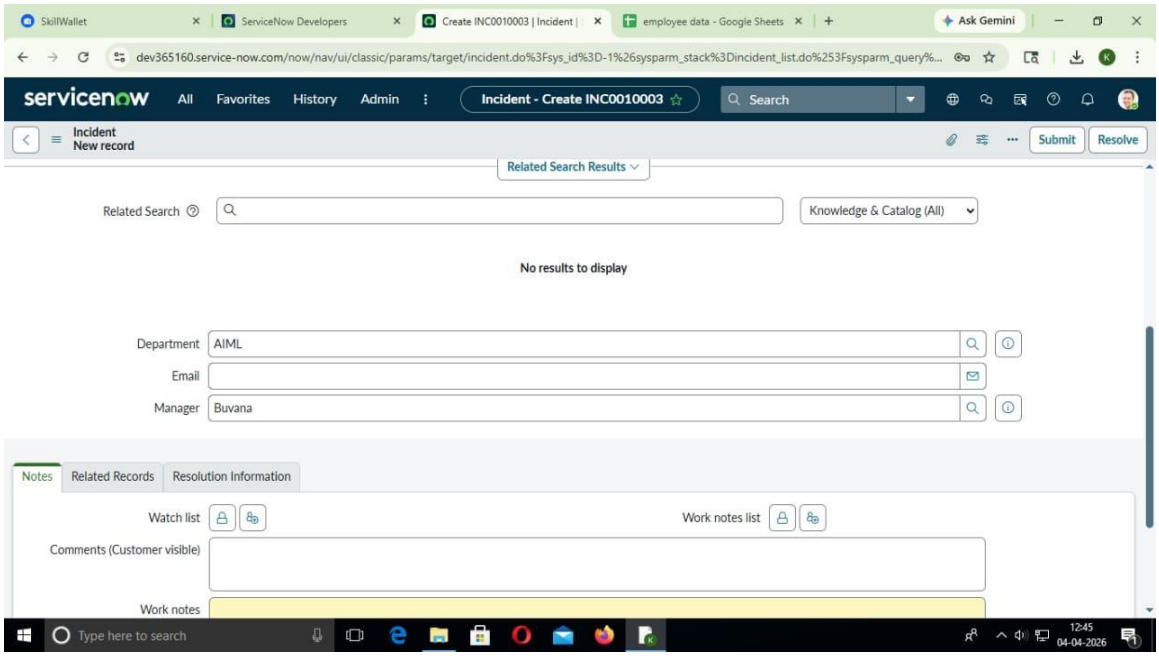
Definition:

Access related fields like assigned_to.department





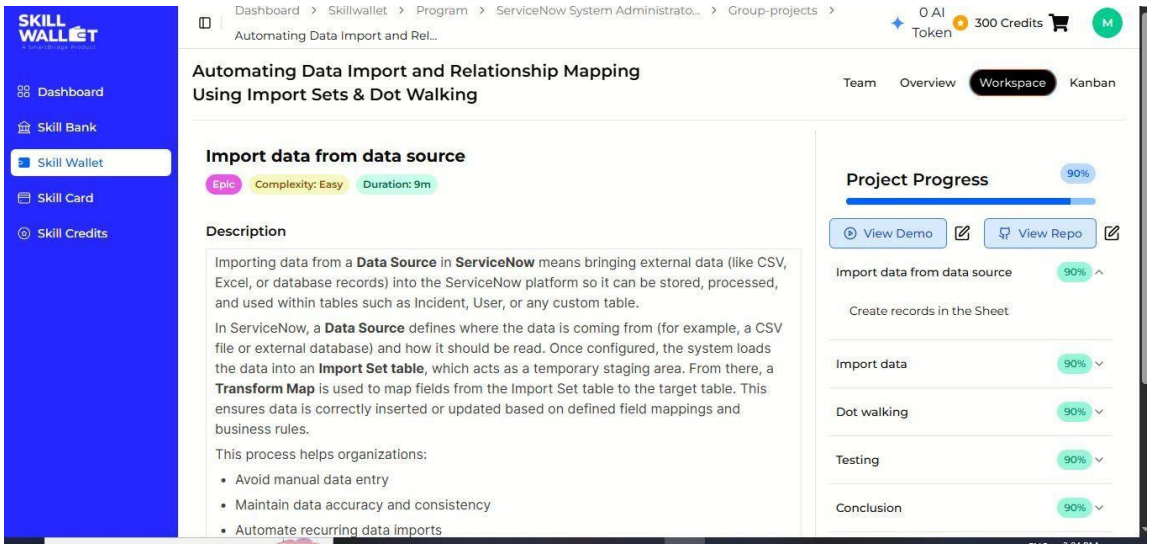
8. Display Department



Steps:

Add assigned_to.department in form layout

9. Final Output



Displays Department, Email, Manager

10. Conclusion

Automating data import and relationship mapping in ServiceNow using Import Sets and Dot Walking streamlines data integration, reduces manual effort, and improves accuracy. It enables efficient handling of large datasets, ensures proper relationships between records, and enhances data consistency, making the overall system more reliable, scalable, and easier to maintain.
